

How to speed up raid1 resync ?

Just echo large numbers into both min and max resync speed proc entries:

`/proc/sys/dev/raid/spped_limit_max` and `speed_limit_min`

e.g. as root do:

```
echo 200000 > /proc/sys/dev/raid/speed_limit_max
echo 200000 > /proc/sys/dev/raid/speed_limit_min
```

And watch the speed fly up till it maxes out your hardware. (-:

The above will set both speeds to 200MiB/s which ought to be more than your devices can do...
